

Understand And Create Sections

A section is a way to group the related fields in a form. It makes you to read and understand the form easily.

A section is useful:

- When a form contains information pertaining to two different departments or user types.
- When a form goes for approval across various users, you can hide selective portions of the form to the users based on their privileges. The privileges such as editable, read-only, or Hidden at section level will be applied to all fields within the section.

1. On the Design Form stage, click **Add Section**.

You need at least three fields, to enable the **Add Section** button in a form.

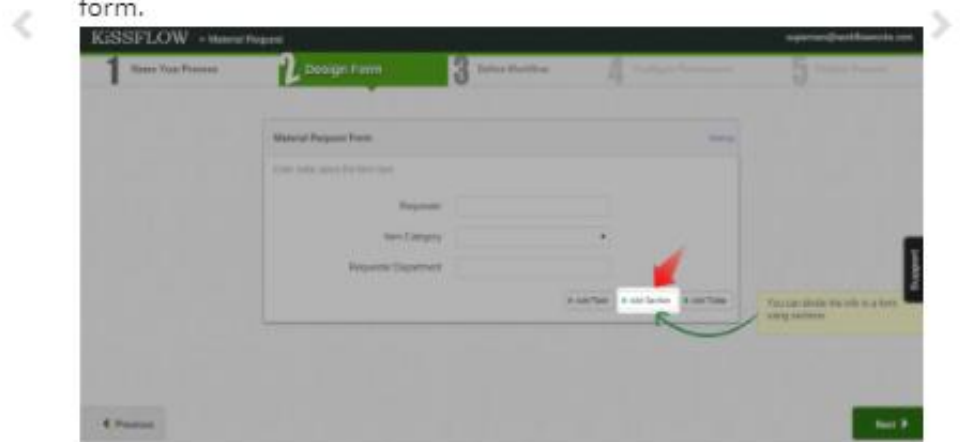

Figure 1: Click Add Section

2. Click **<Untitled Section>** to enter a name to the section as Line Items.

Workflow

- Introduction To A Process
- Workflow Concepts
- Understanding Process Steps
- Assign Owners To Process Steps
- Who Can Initiate Workflow
- Notify Users Other Than Participants
- Configuring Dynamic Permissions In The Form

- Click **Enter hints for this section here** to enter a few lines about the section, which helps the user to understand the need for creating a section.

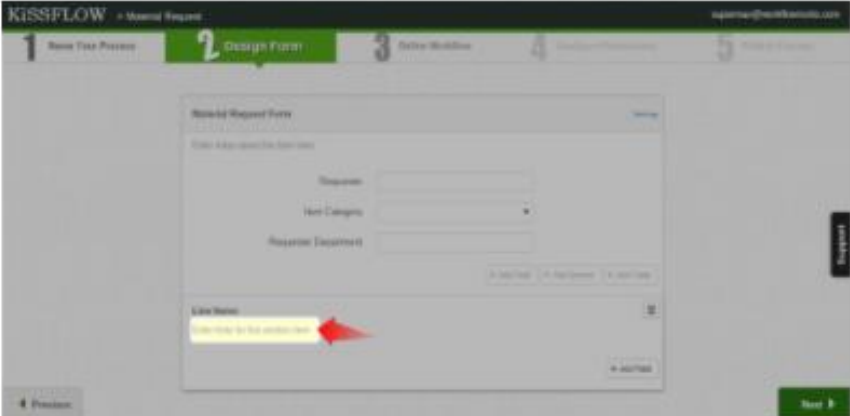

Figure 3: Hint to the section

- Click **Add Field** to enter a field in the section.

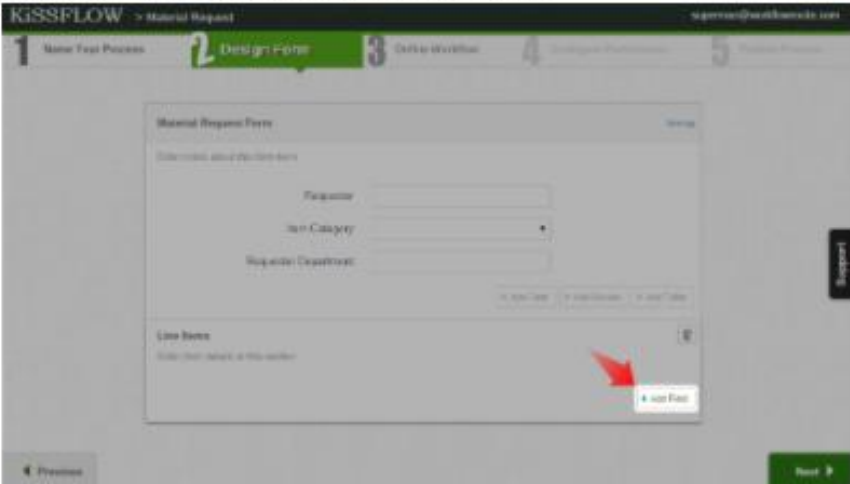

Figure 4: Add fields in a section

- Enter a name to the field, select **field format**, and click save icon to save a field to a section.
- Add the remaining fields accordingly.

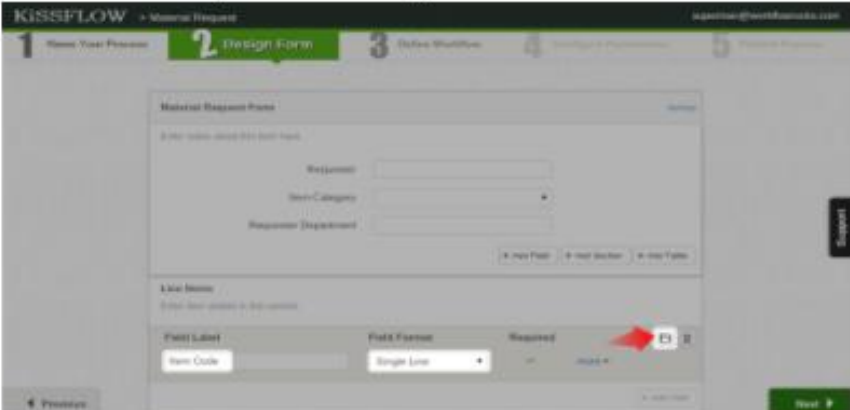

Figure 5: Save a field

6. Add the remaining fields accordingly.

This image shows the 'Design Form' step in the Kissflow interface. The form is titled 'Material Request Form'. It contains several fields: 'Requester' (text input), 'Item Category' (dropdown), and 'Requester Department' (text input). Below these fields are three buttons: 'Add Field', 'Add Section', and 'Add Table'. A red arrow points to the 'Add Field' button. The form is currently in the 'Design Form' step, which is highlighted in green.

You have successfully created a section.

Introduction To A Process

- Workflow Concepts
- Understanding Process Steps
- Assign Owners To Process Steps
- Who Can Initiate Workflow
- Notify Users Other Than Participants
- Configuring Dynamic Permissions In The Form
- Deadline For Workflow Steps
- Actions An Approver / Participants Can Perform In Workflow

Advanced Workflow Configuration

- Assign Users Dynamically To Workflow Steps
- Assigning Users Dynamically Based On Masters

Access Control And Permissions

- Define Permissions At The Form Level
- Dynamic Forms

Publish Process

- Publish Process
- Share The Process With Another Creator
- Notify The Process Owners On Publishing

Understand The Working Of Email Notifications

- Understand Default Email Notifications
- Change The Subject And Body Of The Standard Email Notification

Masters

- Understand And Create Masters
- Import / Export Data In Masters

Reports

Understand Reports

- Understand KPI Reports
- Create An Adhoc Report
- Share Reports With Users
- Export A Report
- Report Configuration

Workflow Summary

Workflow summary displays the total summary of the requests based on the status of the request, graph and a bar chart based on your selection such as for last 12 months, last year, and so on.

On the report you can view the following:

- You can select the type of report according to your requirement from the dropdown menu on the right corner of the page. KISSFLOW displays the workflow summary of the requests in that particular workflow according to your selection from the following values of the drop-down:
 - 3 months
 - 6 months
 - 12 months
 - Custom range
- Total Request, the individual count of open, completed and rejected requests.
- The line graph of the total number of requests against the month.
- The bar graph of the total number of requests against the days of the week.

Figure 6: Workflow summary of requests

Work performance

Work performance is the performance summary of the requests.

➤ Introduction To A Process

- Workflow Concepts
- Understanding Process Steps
- Assign Owners To Process Steps
- Who Can Initiate Workflow
- Notify Users Other Than Participants
- Configuring Dynamic Permissions In The Form
- Deadline For Workflow Steps
- Actions An Approver / Participants Can Perform In Workflow

Advanced Workflow Configuration

- Assign Users Dynamically To Workflow Steps
- Assigning Users Dynamically Based On Masters

Access Control And Permissions

- Import / Export Data In Masters

Reports

➤ Understand Reports

- Understand KPI Reports
- Create An Adhoc Report
- Share Reports With Users
- Export A Report
- Report Configuration

On the report you can view the following:

- A Table that gives a count of the requests based on the status of the request against the count of requests that breached SLA.
- Line graph of the time taken for the request to complete the workflow with minimum and maximum time.
- Allocated Time to complete the request.
- Least Time to complete the request.
- Most Time to complete the request.
- Average Time to complete the request.
- Click the number count of any of the request which is greater than 0 to open the related requests.
- You can select the time period for the report from the dropdown on the right corner of the page such as 3 months,6 months,12 months, and Custom range.

Process Step Performance Summary

Process Step Performance Summary displays the process steps of the selected workflow against specific details such as No. of Requests, Allocated Time, Avg Time, and so on.

Process Step	No. Of Requests	Allocated Time	Avg Time	Max Time	Min Time	SLA Breached	Requests Quoted	Requests Quoted That Breached
Manager Approval	1	2 days	0 second	0 second	0 second	1	0	0

Figure 8: Process performance summary

The number counts above 0 are hyperlinks which opens a detailed report of the requests in that particular business step of the workflow.

Request ID	Business Step	Assigned To	Allocated Time	Average
10000000000000000000	Manager Approval	jane.doe@workflows.com	2 days	0 second
